Remote Start N/A

Cells highlighted in 'yellow' require vehicle equipped w/optional content

^{**} Vehicle must be equipped with Tire Pressure Monitoring

FEATURE	FEATURE DESCRIPTION
Get Current Location	Provides exact GPS location of the vehicle at the point in time request was made. Accuracy impacted by cellular transmission delays, sky coverage & vehicle continuous movement. GPS updates provided at a 1Hz rate.
Telematics	OnStar hardware feature that provides vehicle telemetry data. If enabled, this feature records and uploads vehicle location, speed & heading data on a
	periodic basis (currently every 30 sec for record & every 5 min for upload). Minimum record frequency is every 5 seconds, minimum upload frequency is every
	minute, and vehicle must be located in a market with cellular packet data availability.
Lock / Unlock	Send a remote signal to quickly unlock doors (if vehicle equipped with power locks). Vehicle cannot be in motion.
Odometer - Read	Provides current odometer reading at the time of the request (subject to cellular availability).
Fuel Level - Read	
	Provides current remaining fuel level percentage reading at the time of the request (subject to cellular availability). The developer will receive a decimal value reading and will need to round this value to the nearest 5% (i.e., 50%, 55%, 60%, etc.). This value will align with the reading on the vehicle fuel gauge (assume up to 1% potential variation in readings under normal conditions). It should be noted that the fuel tank level will display "E" (empty) or "FULL" when the fuel level percentages are approximately within 10% of 0 and 100% respectively. The low fuel light comes on when the tank is approximately 11% full. An example system response to consider is that if someone were to take a vehicle with a full tank of gas, and return it at a fuel level of 94% (for example), the fuel gauge in the vehicle would still appear as "full" to the driver. However, if fuel usage is being monitored, it will show that 6% of the fuel in the tank has been used. Finally, the percentage of fuel remaining is a consistent relative measure and not meant to be a precise measure of the actual remaining fuel in the vehicle. GM vehicles will read empty even when some volume of fuel still remains in the system.
Remote Start / Stop	Allows user to remotely start (or cancel start) vehicle, if vehicle equipped with remote start option). Ignition must be in LOCK/OFF. The maximum number of remote starts between ignition cycles with the key is two.
Send to NAV (Destination Download)	Downloads directions to the navigation system in the vehicle. Driver pushes the "Go" button on the navigation screen to begin driving directions. Vehicle must be equipped with Nav Radio & have compatible electrical architecture.
Vehicle Alert (Horns & Lights)	Send a remote signal to activate a vehicle's horn and lights—and make it easier to track down. Vehicle cannot be in motion.
Tire Pressure	Provides vehicle tire pressure readings for all 4 tires (if vehicle equipped with Tire Pressure Monitoring System).
Oil Life - Read	Provides vehicle remaining oil life % at the time of the request (subject to cellular availability).
Send to TBT (Turn By Turn Capable)	Downloaded directions are played as audio guidance, allowing drivers to interact independently. The feature provides route recovery for course deviations at driver request. Vehicle must be equipped with Antilock brakes and be located in a market with cellular packet data availability.
Fuel Economy Capable	Provides vehicle fuel mileage information at the time of the request (subject to cellular availability).
Sleep Cycle (days)	Duration OnStar hardware remains active and available for contact after vehicle ignition turned off. Some OnStar services are disabled after the applicable sleep cycle is reached (2 or 5 days). At the end of this time, OnStar hardware cannot send or receive Remote Commands until the vehicle's next ignition cycle. Remote starting the vehicle will not reset the sleep cycle; a physical "ignition on" in the vehicle is required.
Packet/Circuit	How data can be sent over cellular network. Cellular refers to modulated data over low-bandwith voice channel. Packet is preferred as it is much faster & more efficient than circuit for large data applications.
Supported by RemoteLink	
(for reference)	OnStar RemoteLink lets owners access real-time vehicle data, like oil-life and tire pressure (if equipped). With RemoteLink you can lock and unlock doors (if equipped with power locks) or contact an OnStar Advisor all from your smartphone. If you're a Subscriber with Directions and Connections, you can now find a location with OnStar RemoteLink and send directions right to your vehicle. Vehicle must be located in a market with cellular packet data availability.

Additional Constraints / Limitations:

- Auxillary or Aftermarket equipment may interfere with the ability of vehicles to respond to API commands

- NOT ALL FEATURES ARE AVAILABLE EVERYWHERE, PARTICULARLY IN REMOTE OR ENCLOSED AREAS, OR ON ALL VEHICLES, AT ALL TIMES. The area that a person is driving in may affect the service that can be provided, including but not limited to routing service.

- Feature can't work unless vehicle is in a place where OnStar has an agreement with a wireless Service Provider for service in that area. Feature also can't work unless vehicle is in a place where the wireless Service Provider hired for that area has coverage, network capacity, and reception when the service is needed, and technology that's compatible with the OnStar hardware. Features that

involve vehicle location information can't work unless GPS satellite signals are unobstructed, available in that place and compatible with the OnStar hardware as well.

- Some examples of other problems that may prevent Feature Availability at any particular time or place, or that may impair the quality of the OnStar service are: hills, tall buildings, tunnels, weather, electrical system design and architecture of vehicle, damage to important parts of vehicle in an accident, or wireless phone network congestion or jamming. OnStar is not responsible for any delay or failure in performance if such failure or delay could not have been prevented by reasonable precautions. Additionally, OnStar is not responsible if such failure or delay is caused by acts of nature, or forces or causes beyond reasonable control.
- The routing data provided is based on the most current map information available to OnStar, but may be inaccurate or incomplete. For example, routing data may not include information about one-way roads, turn restrictions, construction projects, seasonal roads or new roads. It may suggest using a road that is now closed for construction or a turn that is prohibited by signs at the intersection. Therefore, driver should use good judgment, obey traffic and roadway laws and instructions and evaluate whether following the system's directions is safe and legal for the current conditions.
